## Low Power, Low Voltage PIR and Vibration Sensor AFE

### GENERAL DESCRIPTION

The SGM8139 is a low voltage low power analog front end designed for PIR and vibration sensors. This part integrates two high input impedance operational amplifiers, window comparator, state control logic, a delay timer, a latch timer, a voltage reference and high current output stages. It can be used in various sensors, delay controllers as well as wake-up circuit in low power consumption systems.

Many industrial and building automation systems use motion detectors to control different functions based on human presence. Using SGM8139 with proper PIR sensor, it is easy to build a compact passive infrared detection system. The output stage of SGM8139 can easily drive different types of lights, buzzers, automatic doors, fans and white goods with programmable timers.

It is especially suitable for office buildings, hotels, shopping malls or automatic lighting and alarm systems, as well as intrusion detection. SGM8139 can be used for motion detection and room monitors in a smart home system as an ultra-low power wake-up block. SGM8139 can be used to condition the vibration sensor, providing a trigger signal to system.

SGM8139 is specifically designed to operate over a wide range of supply voltage from 1.4V to 5.5V. SGM8139 draws only 6 $\mu$ A supply current. It is ideal for applications powered by single cell or dual cell alkaline battery.

With two operational amplifiers, window comparators, and delay/lockout timers adjustable through external RCs, SGM8139 can both process the PIR output signal effectively and provide good anti-interference performance.

The SGM8139 is specified for the -40°C to +85°C industrial temperature range. The SGM8139 is available in Green SOIC-16 and TQFN-2.5×2.5-16L packages. The TQFN package makes it ideal for portable electronic products with area constrained PC boards.

### FEATURES

- **Operating Voltage Range: 1.4V to 5.5V**
- **Average Quiescent Current: 6.5 $\mu$ A (TYP)**
- **Two Integrated High Input Impedance Operational Amplifiers**
- **Integrated Bi-directional Amplitude Discriminator**
- **Adjustable Delay/Lockout Timers With External R and C**
- **Integrated Voltage Reference**
- **Available in Green SOIC-16 and TQFN-2.5×2.5-16L Packages**

**RECOMMENDED OPERATING CONDITIONS**

- Operating Temperature Range.....-40°C to +85°C

**OVERSTRESS CAUTION**

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to

absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

**ESD SENSITIVITY CAUTION**

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.

PIN CONFIGURATIONS

PIN DESCRIPTION

PIN		NAME	FUNCTION
SOIC-16	TQFN-2.5x2.5-16L		
1	15	A	Repeatable Trigger Mode and Non-Repeatable Trigger Mode. When A = "1", repeatable trigger mode is active; when A = "0", non-repeatable trigger mode is active.
2	16	V <sub>O</sub>	Output Terminal. Triggered by V <sub>S</sub> rising edge, and kept low in t <sub>x</sub> and t <sub>i</sub> period.
3	1	RR <sub>1</sub>	Set up the output delay time t <sub>x</sub> . t <sub>x</sub> ≈ 28672R <sub>1</sub> C <sub>1</sub> . The recommended resistor value is more than 3kΩ for RR <sub>1</sub> .
4	2	RC <sub>1</sub>	Set up the output delay time t <sub>x</sub> . t <sub>x</sub> ≈ 28672R <sub>1</sub> C <sub>1</sub> .
5	3	RC <sub>2</sub>	Set up the trigger latch time t <sub>i</sub> . t <sub>i</sub> ≈ 28R <sub>2</sub> C <sub>2</sub> .
6	4	RR <sub>2</sub>	Set up the trigger latch time t <sub>i</sub> . t <sub>i</sub> ≈ 28R <sub>2</sub> C <sub>2</sub> . The recommended resistor value is more than 3kΩ for RR <sub>2</sub> .
7	5	V <sub>SS</sub>	Negative Power Supply. It is normally connected to ground.
8	6	RESET	Chip Reset Input. It is normally connected to V <sub>DD</sub> . Active low.
9	7	V <sub>C</sub>	Trigger Inactive Terminal. When V <sub>C</sub> < V <sub>R</sub> , Trigger inactive; when V <sub>C</sub> > V <sub>R</sub> , Trigger active. V <sub>R</sub> ≈ 0.2V <sub>DD</sub> .
10	8	NC	No Connection.
11	9	V <sub>DD</sub>	Positive Power Supply.
12	10	2OUT	The Output of OP2.
13	11	2IN-	The Inverting Input of OP2.
14	12	1IN+	The Non-inverting Input of OP1.
15	13	1IN-	The Inverting Input of OP1.
16	14	1OUT	The Output of OP1.
—	Exposed Pad	—	It should be connected to V <sub>SS</sub> or left floating.
